1. GENERALITÀ

Il presente elaborato si propone di eseguire un'analisi energetica sui consumi prima e dopo l'intervento di *riqualificazione energetica e normativa dell'impianto di illuminazione pubblica del comune di Fiorenzuola d'Arda*, eseguita ai sensi di quanto previsto dal decreto del Ministero dell'Ambiente e della tutela del territorio e del mare del 28 marzo 2018 (di seguito CAM), in merito ai criteri ambientali minimi per l'affidamento del servizio di progettazione nell'illuminazione pubblica.

I dati del censimento posto a base di gara saranno quindi confrontati con le informazioni raccolte sui consumi storici degli ultimi due anni precedenti e relativi a ciascun anno, al fine di valutare se il consumo teorico di energia calcolato in base al censimento e dei risultati di audit energetici dell'impianto corrisponde o meno al consumo storico documentato.

Le valutazioni di seguito riportate sono in linea con i criteri definiti dalle norme CEI EN 16247-1 e la UNI CEI 11428 per le diagnosi energetiche.

2. I CONSUMI PRE-INTERVENTO

Dai rilievi effettuati in sede di acquisizione dei consumi il sistema di illuminazione pubblica di Fiorenzuola d'Arda impegna attualmente una potenza complessiva installata stimata di 381,85 kW ripartita su punti di alimentazione in parte con contatore di energia e in parte senza contatore, con contabilizzazione a forfait, in special modo con riferimento agli impianti che sono stati riscattati dalla società Enel Sole, che saranno resi completamente indipendenti mediante la costruzione di nuovi quadri;

Il consumo annuo di energia stimato è di 1.987.937,07 kWh/anno nell'ipotesi di esercizio di 4200 ore, senza riduzioni né spegnimenti parziali.

Dall'analisi dei consumi fatturati l'energia consumata nei tre anni precedenti al presente progetto, risultano:

Anno di riferimento	Energia fatturata
2015	1.466.137
2016	1.476.846
2017	1.465.229

Tali valori, forniti dal Distributore, sono riportati all'interno di tabulati puntuali per fattura emessa allegati alla presente relazione, di cui di seguito si riportano solo i complessivi per quadro, estratti tra quelli dedicati all'illuminazione pubblica:

TOT. 1.465.229

Il confronto tra quanti ipotizzato partendo dal rilievo effettuato e quanto fatturato, si differenzia di 552,708 kWh, pari ad uno scostamento del 26 %, che è accettabile considerando le molte incertezze che vi sono in merito ai consumi fatturati, visto che la grande maggioranza dei punti luce non fa capo a un contatore di energia ma è contabilizzata a forfait (in azzurro sulle tabelle riassuntive), come pure le potenze attuali sono state stimate e considerando tutto acceso, situazione che nelle attuali condizioni di funzionamento non è garantita.

Si ricorda che alcune forniture inoltre presentano dei carichi esogeni come la videosorveglianza, mentre

alcuni punti luce non risultano alimentati da forniture tra quelle specifiche per l'illuminazione pubblica, per cui alla consegna degli impianti dovranno essere chiarite queste situazioni che non sono quantitativamente eccessive, ma sono importanti per definire esattamente la baseline dei consumi.

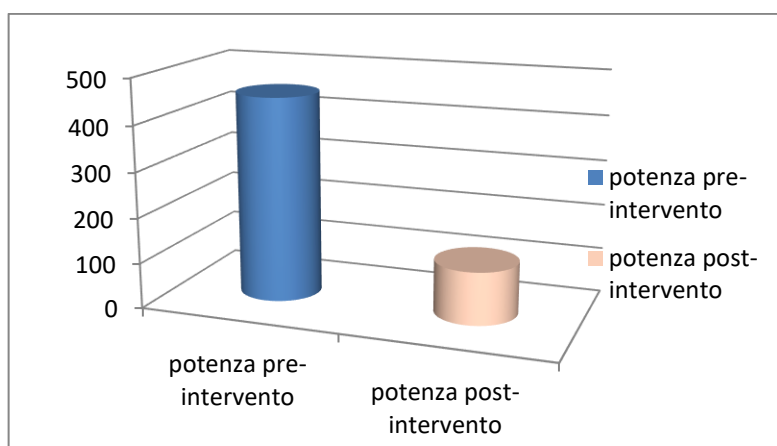

3. I CONSUMI POST-INTERVENTO

Il progetto attuale, attraverso gli interventi di riqualificazione dei punti luce che prevedono la sostituzione dell'intero corpo illuminante o della piastra e dell'alimentatore, comporta una riduzione della potenza installata di circa il 74 %. Il risparmio energetico è ancora superiore, del 78 % circa, stimando un consumo post intervento di 425.186 kWh, ottenuto effettuando sugli apparecchi sostituiti, tranne quelli su strade classificate illuminotecnicamente già a livello minimo, la regolazione del flusso media del 30% nelle ore centrali notturne come spiegato al paragrafo 4.6, e impostando le ore di funzionamento annue in 4.000.

4. CONFRONTO TRA GLI ASSORBIMENTI E I CONSUMI PRE E POST INTERVENTO

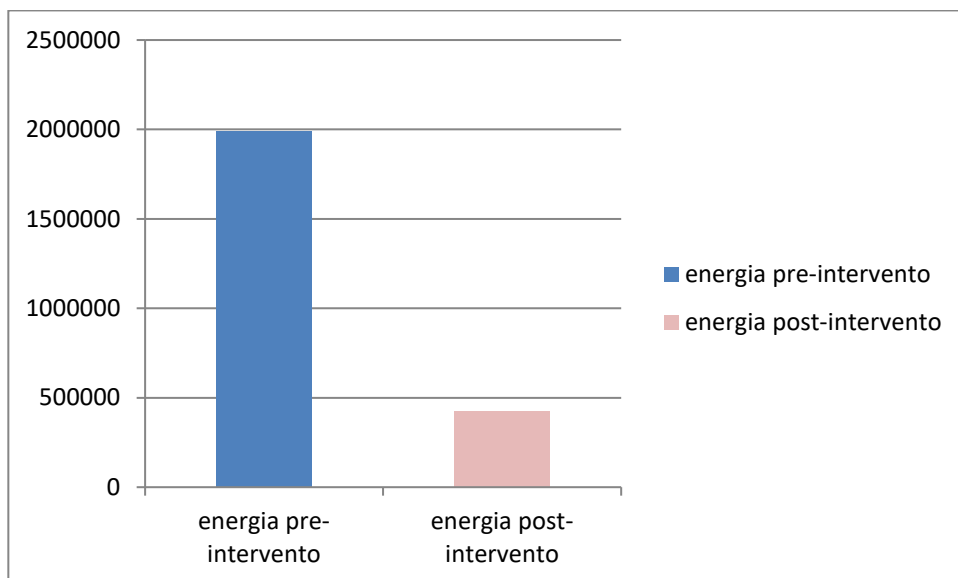

Come si nota dalla tabella, vi è un netto miglioramento della potenza installata con un risparmio del 74%, in quanto i dati relativi alla potenza totale risultano:

POTENZA ANTE OPERAM	POTENZA POST OPERAM
450.778,7 kW	115.768,5 kW

Come si nota dalla tabella, vi è un miglioramento ancor maggiore dell'energia, con un risparmio del 78 %, con in quanto i dati relativi ad essa risultano:

ENERGIA ANTE OPERAM	ENERGIA POST OPERAM
1.987.934 kWh / anno	425.185 kWh / anno

Il risparmio ottenuto di 1.562.749 kWh, corrisponde ad un risparmio equivalente in TEP (tonnellate equivalenti petrolio) pari a 292 TEP, secondo il fattore di conversione definito per l'energia elettrica al punto 13 della circolare MISE del 18 dicembre 2014.

ALLEGATI:

- consumi fatturati nel 2015 per usi "illuminazione pubblica"
- consumi fatturati nel 2016 per usi "illuminazione pubblica"
- consumi fatturati nel 2017 per usi "illuminazione pubblica"
